Bro, what is that?? Can you cover your mouth when you sneeze?

“Hachoooon!”

Bro, I am just trying to be safe. Don’t you know that sneezing openly can be a source of COVID-19 virus transmission. The virus can spread through nasal and oral mucus or droplets.

Hey bro, you are so sensitive. What's the matter?

Bro, every time you sneeze or cough, cover your nose and mouth with tissue and dispose of it properly.

If everybody follows the proper etiquette of coughing and sneezing, we will all be safe against the COVID-19 virus.

Yes Bro! That is good.

I don’t have tissue paper. Can I use the sleeves of my shirt?

Thanks a lot Bro,
Mare, According to TV news there are already so many COVID cases in the Philippines. That is why I wear a mask always.

Hey dude! First of all, you are wearing your mask improperly. Make sure that your mouth and nose are fully covered. Next, don't let anybody else use your disposable face mask.

Always make sure that you dispose of the mask properly. If you are using reusable or washable face masks, make sure that you wash them regularly.

Thank you so much, friend. You may not see it but I am already smiling.

Dude, always remember, you are wearing your face mask so you can protect yourself and other people from transmitting diseases like COVID-19.
